Favorable conditions for business

Do you have a large volume? We will make an individual calculation and offer personal terms.

API

Do you have your own product with a large number of transactions? Connect Keeply features directly to your services: energy purchase, auto-buy, and «Always Charged».

WHO **KEEPLY** IS SUITABLE FOR

For projects of any scale — from exchangers to platforms with thousands of operations

✓ Single transfers

✓ Users with temporary wallets

✓ Users with temporary wallets

✓ Large volumes of transfers

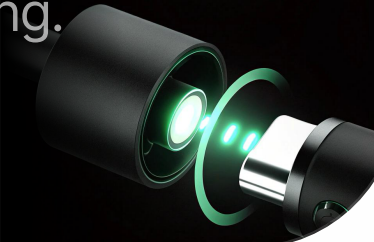

Small business and e-commerce

We help online stores and services with frequent transactions in USDT TRC-20. We will reduce commission costs, eliminate failures due to lack of Energy, and automate energy supply according to sales schedule and peak loads.

Cryptocurrency Exchanges

We reduce your costs for withdrawals in USDT TRC-20 and TRX when transferring to deposits through uninterrupted TRON Energy supply. Monthly reporting. Automate with API.

Gambling

Do you have your own processing system and don't use energy for withdrawals in USDT TRC-20? You are losing hundreds of thousands of dollars on fees. We will provide uninterrupted energy supply 24/7. Our API solution with full process automation is ideal for you.

Payment Services

Savings on fees for withdrawals in the TRON USDT TRC-20 network. Your service's profit will increase manifold. The Keeply «Auto-Refill Energy» function does not require manual control. You simply transfer funds. You have hundreds of withdrawals per day, we have a convenient API for you.

Exchangers

Savings on fees for withdrawals in the TRON USDT TRC-20 network. Your service's profit will increase manifold.

HOW DOES IT WORK?

TRON is a fast blockchain, but transaction fees for USDT can be high.

Keeply offers a smart Telegram bot and a convenient API that automates working with TRON Energy and helps reduce transaction costs by up to 72%.

Transaction fees on TRON depend on resources — Energy and Bandwidth.

Without them, TRX is deducted:

- Transferring USDT: ~6.77 TRX (~\$2.21)
- Transferring without USDT: ~13.37 TRX (~\$4.36)

WITH ENERGY, IT'S FREE — BUT YOU NEED ENERGY, AND WE HAVE PLENTY OF IT.

- You'd need to stake a lot of money — for instance, about \$6,000 just to get Energy for one transaction.
- Use Services of Energy Providers.

ENERGY: WHAT IT IS AND WHY YOU NEED IT?

Energy in the TRON (TRX) Network is the "Fuel" for Free Transactions

Imagine you need to send a package (transaction) on the TRON blockchain:

- TRX (the coin) is the money in your account. You can transfer it, spend it, or sell it.
- Energy is a voucher for free transfers that you receive once a day.

How Does It Work in Practice?

You need to send TRX to someone or execute a smart contract.

The system first checks:

- Do you have enough "vouchers" (Energy) in your account?
- If there is **ENOUGH Energy**, the operation is FREE. Only Energy is deducted from your account, **not the TRX themselves**.
- If there is **NO or INSUFFICIENT Energy**, the transaction fee is **automatically charged from your wallet in TRX**.

It's like paying for shipping with cash if you didn't have a voucher.

KEEPLY FEATURES

Energy Purchase

The best solution for those who transfer irregularly. Choose the required amount of energy and period — the bot will calculate the cost itself. After confirming the purchase, energy is immediately credited to your wallet.

Always Charged

With the «Always Charged» function in Keeply, your wallet is always ready for work — without manual control over energy. When connecting this function, you will not pay a fee each time, and the wallet will be replenished automatically!

Auto-Buy Energy

The system monitors your wallet, energy 24/7 and instantly replenishes it if energy falls below the set level.

No delays or stuck transactions — everything is on autopilot.

API

For developers and projects — connect Keeply features directly to your services: energy purchase, auto-buy, and «Always Charged».

- Automatic energy replenishment on addresses;
- Activation of the «Always Charged» mode;
- Connection of the «Auto-Buy Energy» function;
- Real-time balance monitoring.

WHY SHOULD YOU USE **KEEPLY** TO BUY ENERGY?

Simple API integration and we will help with it

Energy in 2-4 seconds, without verification

Save 42-72% on fees

We provide up to 100,000 transactions per day

Support 24/7

The larger the transaction volume, the lower the price

Suitable for any wallets

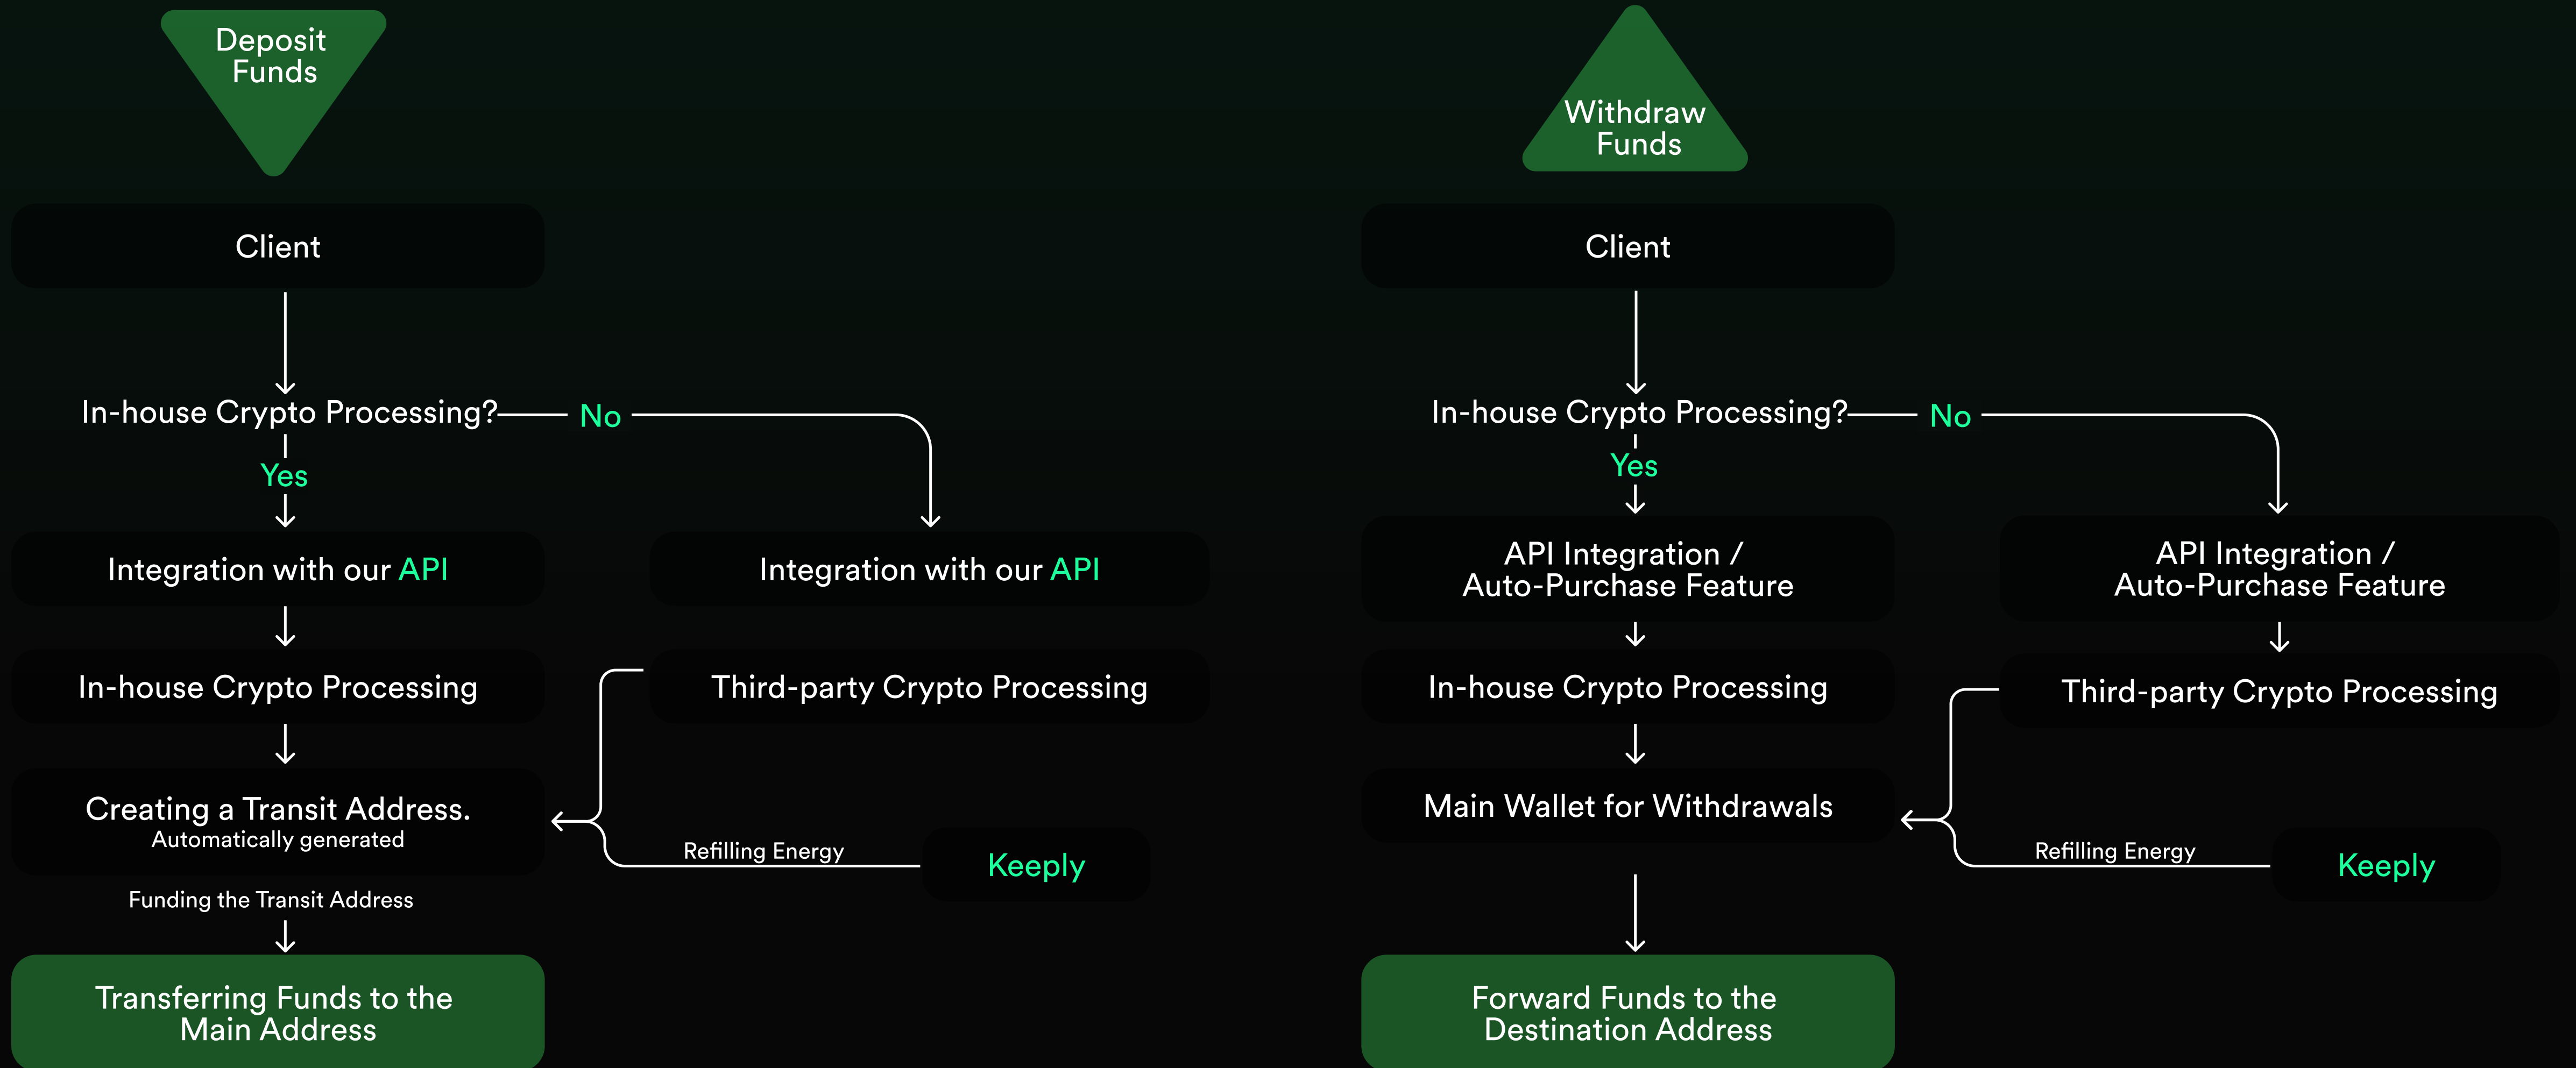

Stable access to energy without looking for additional suppliers

Important

Safety first. Keeply does not require private keys or access to your wallet. All that is needed is just the address. Be careful: if somewhere asks for access to a wallet, it is fraudsters.

API INTEGRATION PROCESS

HOW TO START WITH **KEEPLY?**

With minimal effort on your part

1. Top up balance

Alexander

TRX / USDT

2. Set up the process

Auto-Refill Energy

3. Conduct operations

Keeply

65000 Energy
