SvelteKit × Select frameworks...

The Multi Select Component is inspired by [campsite.design](#) 's and [cal.com](#) 's settings forms. It is:

- simple and lightweight
- keyboard accessible including ``backspace`` to remove label
- powered by the headless command menu package ``cmdk``, made by [@paco](#) and [@raunofreiberg](#)
- designed with [ui.shadcn](#)

If you don't want to install ``cmdk`` and create and maintain your own component, I recommend you to check out ``react-select`` instead.

The source code is available on [GitHub](#).
